PROFESSIONAL SUMMARY

Full-Stack Engineer specialized in Angular 20/TypeScript and .NET Core, with hands-on experience across Clean Architecture, Domain-Driven Design (DDD), and CQRS. Architected and shipped a foreign trade platform now used daily in production, and contributed to backend microservices for authentication, role management, and CRUD operations with custom validation and Entity Framework. Builds AI-integrated workflows (Claude Skills, MCP servers) into daily delivery to move faster without cutting corners on architecture. Self-driven learner with a Systems Engineering background, now targeting remote full-stack roles with US-based teams.

TECHNICAL SKILLS

Frontend: Angular 20, TypeScript, JavaScript (ES6+), RxJS, React, HTML5, CSS3/SCSS

Backend & Architecture: .NET Core, C#, Clean Architecture, Domain-Driven Design (DDD), CQRS, MediatR, Entity Framework Core, Microservices, Unit Testing, Authentication

Frontend Patterns: Facades, DI Tokens, Signals, NgRx, Standalone Components, Lazy Loading, Micro-frontends

AI-Driven Development: Claude Agents, AI Skills (Prompts), Masters, MCP Servers, AI-to-Design Handoff, Prototype-to-Code

UI & Design Systems: Design Tokens, npm Libraries, PrimeNG, Bootstrap, i18n/Translations, WCAG Accessibility

Tooling & Practices: RESTful APIs, Git-flow, Azure DevOps, Jira, Bitbucket, Scrum, CI/CD

PROFESSIONAL EXPERIENCE

Full-Stack Engineer (Angular & .NET)

Logit (Magnum Logistics S.A.S) — Medellín, Colombia (Hybrid) | Feb 2025 – Present

- Architected and shipped a full foreign trade platform from scratch (imports, exports, purchase orders, product catalog, client management) using Angular 20 — now fully functional in production; the visual and usability overhaul was a major leap for users and a key differentiator that helped win new clients over competitors.
- Contributed to backend development in .NET Core within a microservices architecture built on Clean Architecture, Domain-Driven Design (DDD), and CQRS; helped design authentication, role-management, and CRUD microservices with custom business validation, using Entity Framework and unit testing.
- Built an AI-integrated development workflow with Claude Skills, Masters, and MCP servers — including automated generation/parsing of platform files — from Claude Design prototypes to custom-Skill implementation, reducing delivery time across frontend and backend.
- Co-designed a standalone Angular design system (npm library: design tokens, SCSS variables/mixins, reusable components); implemented full i18n and enterprise-grade audit and role/permission services.
- Applied advanced Angular patterns — Facades, DI Tokens, Signals, resolvers, interceptors with access/refresh-token auth, reactive forms, dynamic catalog preloading — integrating PrimeNG and Bootstrap for consistent, fast UI delivery.
- Mentored junior Angular developers through onboarding, code reviews, and hands-on training; managed multi-environment deployments (dev/QA/prod) with Git-flow, pull requests, and cloud validation pipelines.

Front-End Developer

Universidad de Antioquia — Medellín, Colombia (Remote) | Feb 2024 – Dec 2024

- Built modules for an accessibility-first platform (WCAG-aligned) for individuals with disabilities: adaptive surveys with dynamic question types, role-based interfaces, conditional rendering, and full REST API integration.
- Delivered a capstone event-management system for the Pablo Tobón Uribe Theater (React, Redux, Tailwind, Python, Node.js, Docker) — full-stack, end-to-end.
- Contributed to unit and E2E testing; gained hands-on exposure to .NET microservices, CI/CD pipelines, and Azure DevOps.

Web Developer

Adage LATAM — Medellín, Colombia (Remote) | Aug 2021 – Jul 2022

- First professional role in a production agile environment: developed Angular front-end components, contributed to unit/E2E testing, and gained foundational exposure to .NET backend, microservices, Azure, and CI/CD.

Freelance Web Developer

Independent | Jan 2017 – Jun 2018

- Built e-commerce, real estate, and small-business websites end-to-end (WordPress, HTML, CSS, PHP, SEO), managing client relationships from requirements through delivery.

EDUCATION

B.Sc. Systems Engineering

Universidad de Antioquia — Medellín | 2017 – 2024

Continuous Self-Learning — *Platzi | Udemy, 2017 – Present: advanced Angular, .NET Core & Domain-Driven Design, software architecture, AI tooling.*

Languages: English – B2/C1 (Upper-Intermediate), Spanish – Native. **Open to:** Remote (US-based companies), Relocation.
