

Juan David Rios Rodriguez

Front-End Engineer | Angular Specialist | AI-Integrated Development

PROFILE

Front-End Engineer with a self-driven background — I started programming independently, building the discipline and curiosity that still define how I work today. I specialize in Angular (v20) and TypeScript, architecting enterprise-scale platforms from scratch and integrating AI workflows — Claude Skills, Masters, and MCP servers — as a core part of how I design, build, and deliver. Not as a trend, but because it genuinely changes what's possible in a day's work. I care about the full picture: the architecture that makes a codebase last, the design system that keeps teams consistent, the client conversation that turns a vague requirement into a precise solution. I've shipped a platform that real clients use daily and came back with strong feedback — that's the kind of outcome I build toward. I'm looking for a remote team that holds itself to a high standard, moves fast on things that matter, and builds products worth being proud of.

CORE SKILLS

Frameworks & Languages

Angular 20 TypeScript JavaScript ES6+ RxJS React HTML5 CSS3 / SCSS

Architecture & Patterns

Facades DI Tokens Signals NgRx Standalone Components Lazy Loading Micro-frontends

AI-Driven Development

Claude Agents AI Skills (Prompts) Masters MCP Servers AI-to-Design Handoff Prototype-to-Code

UI & Design Systems

Design Tokens npm Library PrimeNG Bootstrap i18n / Translations WCAG Accessibility

Services & Tooling

Audit Services Role & Permission Services RESTful APIs Git-flow Azure DevOps Jira / Bitbucket

SCRUM

EXPERIENCE

Front-End Engineer

Logit (Magnum Logistics S.A.S) | Medellin, Colombia | Hybrid

Feb 2025 - Present

- ▶ Architected and shipped a full foreign trade platform from scratch (imports, exports, purchase orders, product catalog, and client management) using Angular 20 — now live in production and actively used by real clients. The platform delivered measurable business impact: significantly improved ease of use and intuitiveness, faster operation execution, major performance gains, and a complete visual overhaul — receiving strong positive feedback from end users.
- ▶ Developed an AI-integrated workflow using Claude Skills, Masters, and MCP servers: UI prototypes are designed in Claude Design, refined through a handoff process, and implemented via custom Skills — dramatically reducing development time across the team.
- ▶ Co-designed and co-developed a standalone design system published as an npm library, using design tokens, centralized SCSS variables/mixins, and a full reusable component library (buttons, forms, tables, modals, layouts, detail/edit pages).
- ▶ Implemented full internationalization (i18n) with massive form and interface translation across the platform, supporting multiple locales with Angular's i18n tooling.
- ▶ Built enterprise-grade services: audit services for error validation and traceability, and role/permission verification services for granular access control across all platform modules.
- ▶ Applied advanced Angular patterns throughout: Facades, DI Tokens, Signals, resolvers, interceptors with access/refresh token auth, reactive forms with real-time validation, and dynamic catalog preloading.
- ▶ Integrated PrimeNG and Bootstrap to accelerate interface creation, maintaining visual consistency through the design system while maximizing delivery speed.

- ▶ Mentored junior Angular developers through onboarding sessions, code reviews, and hands-on training on modern architecture, AI-assisted development, and best practices.
- ▶ Participated actively in ongoing technical training sessions with other developers, and in business-aligned sessions with clients to translate operational requirements into scalable frontend solutions.
- ▶ Maintained continuous collaboration with UI/UX designer and product manager to align interface decisions with product vision and user needs.
- ▶ Managed multi-environment deployments (dev / QA / prod) with Git-flow, pull requests, code reviews, and cloud validation pipelines.

Front-End Developer

Universidad de Antioquia | Medellín, Colombia | Remote

Feb 2024 - Dec 2024

- ▶ Built an accessibility-first platform (WCAG-aligned) for individuals with disabilities, building multiple configurable modules with complex multi-configuration logic — adaptive surveys with dynamic question types, role-based interfaces, conditional rendering, and full REST API integration. This project marked a significant leap in programming logic and problem-solving, tackling advanced component configurations and data-driven UI patterns that laid the foundation for the architectural thinking applied in later roles.
- ▶ Collaborated with UX/UI designers and stakeholders to deliver accessible, compliant interfaces that improved usability for a diverse user base.
- ▶ Delivered a capstone event management system for the Pablo Tobon Uribe Theater (React, Redux, Tailwind, Python, Node.js, Docker) — full-stack, end-to-end.
- ▶ Contributed to unit and E2E testing; gained hands-on exposure to .NET microservices, CI/CD pipelines, and Azure DevOps.

Web Developer

Adage LATAM | Medellín, Colombia | Remote

Aug 2021 - Jul 2022

- ▶ First professional role in a production agile environment. Developed Angular front-end components, contributed to unit and E2E testing, and gained foundational exposure to .NET backend, microservices architecture, Azure, and CI/CD pipelines.

Freelance Web Developer

Independent

Jan 2017 - Jun 2018

- ▶ Built e-commerce, real estate, and small business websites end-to-end (WordPress, HTML, CSS, PHP, SEO). Managed client relationships independently from requirements to delivery.

EDUCATION

B.Sc. Systems Engineering

Universidad de Antioquia | Medellín

2017 - 2024

Continuous Self-Learning

Platzi | Udemy

2017 - Present

- ▶ Ongoing courses in advanced Angular, software architecture, AI tooling, and full-stack development.

LANGUAGES & ADDITIONAL

English - B2/C1 (Upper-Intermediate)

Spanish - Native
